July 9, 1951

Dear Lederberg,

Many thanks for the sample of Abopon which arrived in good condition. It has been much used already and a larger amount is on order. I believe that I shall continue to photograph my specimens in water, but it is certainly a great help to be able to preserve ones slides.

I enclose some very ancient photographs (to be returned at your convenience) of the kind on which my diagrams were based. Those strands of chromatinic matter between separating structures are always found and not missing in Murray's new preparations either.

I am hoping that Fitzjames can go to Brookhaven for the conference on the biochemistry and physiology of the nucleus in mid-August but expect you will be too busy to attend.

Let me thank you once more for visiting us here on your return from Cold Spring. I enjoyed seeing you and was glad to hear a first hand account of the proceedings.

Best wishes to you both
from

C. Robinson
